

## Maths Year 5 Unit1 Addition and Subtraction 2 - 2024-25 (14.10.24)

### Work to Praise and Share

- Max, Sam, Ben H, Freya and Alice have a very good understanding of the inverse operation and how to use it
- Class generally much better with multi-step methods
- Most of the class able to compare calculations and explain how they knew one sum would give them a greater/lower answer than another
- Jimmy and Jensen very good at finding the missing numbers in sums
- Pre-teaching intervention, which focused on finding missing numbers, seemed to work well for Claudia and, to some extent, Poppy and Logan

### Presentation Highlights

### Support Needed

- Araya, Harry, Millie-Anna, Skyla and Theo particularly confused with the idea of using and finding the inverse operation

### Basic Errors

- 

### Next Lesson Steps

- General skills around reading the question still need working on, although this was much better during our work on multi-step questions
- Finding missing numbers was difficult for most as they failed to spot the usefulness of utilising the inverse, as well as either column method, to help find the numbers.
