

Maths Year 5 Unit2 Fractions A1 - 2024-25 (26.11.24)

Work to Praise and Share

- 2 lessons needed on finding fractions equivalent to a unit fraction. However, the whole class as much better after more practise with shading (and counting!) as well as using their times tables to find equivalent fractions.
- The above improvements were seen from the start when finding equivalent non-unit fractions - great to see.
- Good start to converting improper fractions into mixed numbers using either bar models or division skills - especially Jaxson, Isla and Lucas
- LA children - Mata, Oscar and Harry able to have a good go

Presentation Highlights

- Some of the class needed to be shown how to write a fraction in neatly in their Maths book (not squishing the whole fraction into one square).

Support Needed

- Araya and Millie-Anna found this very tricky.

Basic Errors

- Max - writing down the fraction without the whole number when converting from improper fractions to mixed numbers. Fine once spoken to.
- Millie - changing the denominator when she doesn't need to at first, but seems fine now.
