

Maths Year 5 Unit2 Fractions A3 - 2024-25 (13.12.24)

Work to Praise and Share

- Most ok with adding and subtracting fractions with the same denominator
- Very good converting improper fractions into mixed numbers from the more able as well as the lower middle ability children eg Claudia, Poppy and Lyla.
- Most of the class much better with adding fractions within 1 and fractions greater than 1 after a second lesson on it - working out also more visible in their books

Support Needed

- LA children and Caine found it difficult to convert fractions when changing denominator
- MA and LA children struggling with concept of forming a mixed number from an improper fraction - removed having to make a mixed number from the task for LA so they could practise just adding fractions

Presentation Highlights

Basic Errors

- 2 lessons needed on adding fractions within 1 - children just not showing their working out and becoming confused when converting a fraction in order to change the denominator.

Next Lesson Steps

- Quick steps (1-3) on how to create a mixed number from an improper fraction without using bar models - will do this in more lessons as well helpful when adding fractions greater than 1.
