

Maths Year 5 Unit2 Week 6 (T2) Fractions A4 - 2024-25 (9.1.25)

Work to Praise and Share

- Practise needed with subtracting fractions, but most of class got there in the end
- Promising start to subtracting from a mixed number - especially the more able children
- Middle ability children seem more confident when subtracting from a mixed number as opposed to subtracting with fractions even though they are using the same method
- All children - apart from those opposite - can subtract from a mixed number (using either mixed numbers or fractions) as long as all they have to do is change the denominator

Presentation Highlights

Support Needed

- Araya has found most of this unit inaccessible and has had a go with more basic fractions, shading in bars to help her
- All need help and practise when subtracting from a mixed number as well as taking a mixed number away from another: Lyla, Mata, Millie-Anna, Oscar, Claudia, Caine and Keegan

Basic Errors

- Caine - forgetting to multiply the numerator when converting a fraction

Next Lesson Steps

- Lucas - needs prompting to use the given method rather than one of his own (which leads to him getting simple answers wrong)
